A company identity built around the product.

AI surveillance & threat prevention

Continuous observation becomes an actionable signal. NIVRA analyses camera sequences, surfaces a developing event for human review, then supports a coordinated response.

Ambient.ai

Technical precision and serious security positioning.

Coram

Clean spatial explanation, with the product doing the talking.

Spot AI

A connected system of colour, video and visible analysis.

One premise. Three executions.

The following directions test scan rhythm, shared context and lead time. They are complete identity proposals for comparison, not approved production logos. Competitor observations are design assessments; vendor product claims are not independently verified.

Headings 600-700. Body 400, 16 px minimum with 1.5 line height. IBM Plex Mono for timestamps and compact technical labels. Keep NIVRA plain and compact; refine the oversized generated lettering after selection.

READABLE TEXT COMBINATIONS

Review sequence / 16.56:1

Review sequence / 16.56:1

Review sequence / 5.70:1

Blue identifies the brand and selection. Obsidian supports long review sessions; Cloud keeps communication clear. Brand accent is not an alert severity. Status needs a label and icon as well as colour.

Repeated observations resolve into a focused signal.

Carry the interrupted scan bands into image crops and evidence strips. Use one selected frame to break the repeated rhythm.

Review sequence / 10.32:1

Cyan marks the selected observation. Deep ink grounds the identity; Frost gives the imagery breathing room. Brand accent is not an alert severity. Status needs a label and icon as well as colour.

Two observation fields form one shared window.

Use paired offset crops to join a wider scene with the moment under review. The opening stays clear and consistent.

READABLE TEXT COMBINATIONS

Review sequence / 15.52:1

Review sequence / 15.52:1

Review sequence / 10.48:1

Amber supplies presence and selected-state emphasis. Carbon supplies structure; Chalk supports readable content. Brand accent is not an alert severity. Status needs a label and icon as well as colour.

Consecutive moments create an interval to act.

Use three consecutive frames and a visible interruption. Expand the selected moment into a human-review panel.

What I would take forward.

01 / Signal

The small symbol can resemble a generic data mark. Its silhouette and internal gap need refinement after selection.

02 / Context

The symbol may read as a general software or spatial brand. Its category fit relies more heavily on the full system.

03 / Lead Time

The stepped construction feels mechanical and may resemble a media or industrial mark. Avoid hazard stripes and warning-sign styling.

Recommendation: Signal

Its graphic language connects most consistently to observation and review. This is a design recommendation, not proof of distinctiveness. Selection comes before vector finalisation, small-size testing and a dedicated similarity search.
