TOGETHER

Identity and logo

Direct / perceptive / confident

A compact viewing aperture makes observation the identifying feature.

NIVRA supports people who review developing camera events and coordinate a response. The identity should feel protective, watchful and effective.

One symbol, one plain name

Use the standalone mark with NIVRA in straightforward lettering. No hidden initials, altered letters or separate product logos.

Space and reproduction

Start with clear space of one-quarter of the symbol height. Use a single-colour or reversed version on busy surfaces. Do not stretch, rotate, shadow or redraw.

The optical mark needs a final distinctiveness check. Refine the aperture and outer contour before producing master vectors. Exact minimum sizes follow selection.

Notice. Review. Respond.

Aa Bb Cc 0123456789

Headings 600 / body 400 / labels 700. Body 16 px with 1.5 line height; captions 12 px minimum. Sentence case for instructions. Use normal font letters for the NIVRA name.

CHECKED TEXT PAIRS

Clear text / 15.73:1

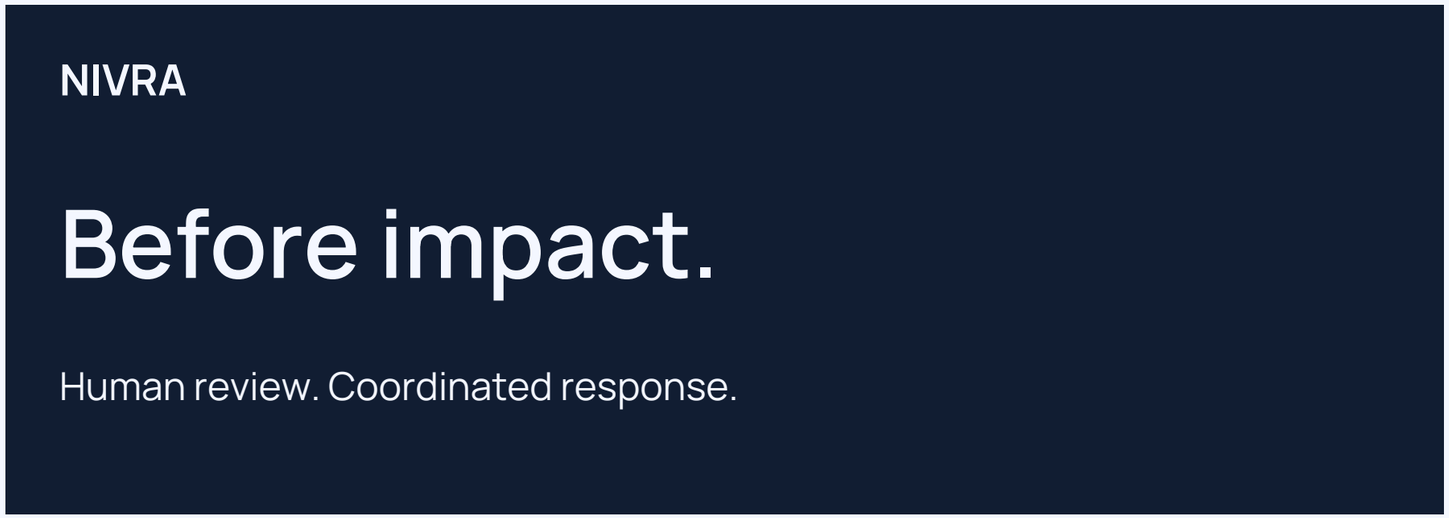

Clear text / 6.09:1

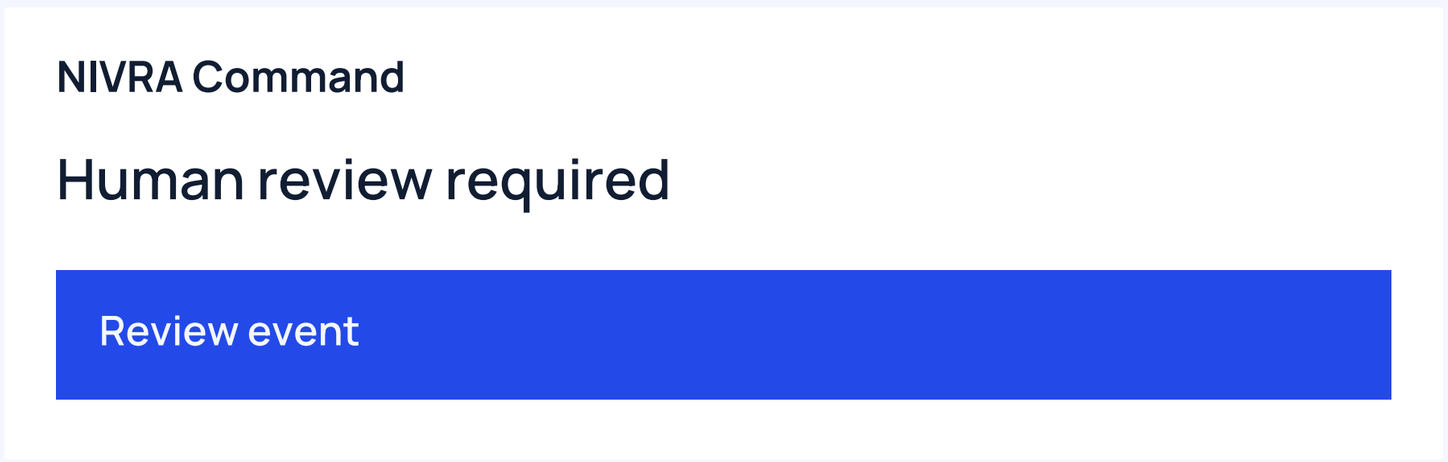

Clear text / 13.97:1

Exact sRGB values govern the kit. Generated pixels are illustrative. Licensed font files and OFL terms are included.

Graphics and applications

COMPOSITION STUDIES / SVG TEMPLATES INCLUDED

An enlarged aperture creates a window into a real place. Use one crop per composition, with a broad quiet field around it.

Voice and product language

Watchful technology.
Human decisions.

Use plain, calm language. State what was observed, what needs review and who acts next. Be specific about uncertainty.

Core line

Before impact. Keep this as the leading brand line. Supporting description: Human-reviewed observations. Coordinated response.

Product family

NIVRA Command / Camera / Respond / Admin / Trust. One shared identity, with the product name as a readable descriptor.

Operational copy

Human review required. Response requested. Acknowledge. On scene. Situation clear. Analysis limited by poor visibility.

Claims and restraint

Do not infer intent, guilt or identity. Do not promise crime prediction, guaranteed prevention or automatic policing. Brand colour alone must not indicate urgency.

Use the kit

Included files

Six-page guide, visual identity board, CSS/JSON colour and type tokens, licensed supporting fonts, and three editable SVG application templates.

Editable applications

campaign-poster.svg / presentation-cover.svg / review-card.svg. Text remains editable and fonts are embedded. Templates use the plain NIVRA name and exact tokens.

Composition

Use a clear dominant colour field and one deliberate graphic crop. Blue 40% / white 35% / ink 15% / lime 10%. Treat these as starting proportions, not fixed quotas.

Image direction

Use real places, natural architectural light and useful lines of sight. Keep people anonymous. Avoid staged threats, weapon imagery and decorative tracking boxes.

Application status

Board photography, credentials and screens are generated concept applications. Names and event details in them are illustrative. They are not a working app or deployment evidence.

Before final production

Select a direction, refine one exact symbol master, verify small-size and one-colour use, then export SVG/PNG logo families and print proofs. No final vector logo is claimed here.

Copy and colour authority

Use the wording on page 5 and exact tokens on page 3. Incidental slogans in the generated overview are not approved copy. Print CMYK values require a chosen profile and proof.

Typography provenance

Manrope from Google Fonts, licensed under SIL Open Font License 1.1. Font files and licence are included. The PDF uses the actual fonts; board lettering is illustrative.
